Measuring items	Symbol	Measuring conditions
Forward voltage	VF (V)	IF=20mA
Reverse current	IR(uA)	VR=5V
Luminous intensity	Iv (mcd)	IF=20mA

Notes:

1. U means the upper limit of specified characteristics. S means initial value.
2. Measurment shall be taken between 2 hours and after the test pieces have been returned to normal ambient conditions after completion of each test.

● Notes for designing:

Care must be taken to provide the current limiting resistor in the circuit so as to drive the TOPTEN LEDs within the rated figures. Also, caution should be taken not to overload TOPTEN LEDs with instantaneous voltage at the turning ON and OFF of the circuit.

When using the pulse drive care must be taken to keep the average current within the rated figures. Also, the circuit should be designed so as be subjected to reverse voltage when turning off the TOPTEN LEDs.

● Storage:

In order to avoid the absorption of moisture, it is recommended to solder TOPTEN LEDs as soon as possible after unpacking the sealed envelope.

If the envelope is still packed, to store it in the environment as following:

(1) Temperature : 5℃-30℃(41℉)Humidity : RH 60% Max.

(2) After this bag is opened, devices that will be applied to infrared reflow, vapor-phase reflow, or equivalent soldering process must be:

a. Completed within 24 hours.

b. Stored at less than 30% RH.

(3) Devices require baking before mounting, if:

(2) a or (2) b is not met.

(4) If baking is required, devices must be baked under below conditions:

12 hours at 60℃±3℃.

● Package and Label of Products:

(1) Package: Products are packed in one bag of 1000PCS (one taping reel) and a label is attached on each bag.

(2) Label:
